Advised by Dr. Yogesh Girdhar, Dr. Dana Yoerger, and Prof. Daniela Rus
- Extended ROST (Realtime Online Spatiotemporal Topic modeling), an algorithm based on hierarchical Dirichlet processes to create “curiosity-driven” learning, to mapping settings. Used on underwater autonomous vehicles for exploring novel environments and classifying regions of interest into topics.
 - Developed controls for underwater and surface vehicles, testing infrastructure, and in-tank localization.
 - Researching machine learning and vision-based methods for autonomous marine animal tracking.
- University of Washington** *Fall 2018 to 2019*
Advised by Prof. Kristi Morgansen (UW Aero&Astro) and Dr. Sarah Webster (UW APL), Graduate Researcher
- Studied automated tuning strategies for Kalman filters used on UW Seaglidors.
- MIT Media Lab, Mediated Matter Group** *May 2016 to 2018*
Advised by Prof. Neri Oxman, Graduate Research Assistant
- Designed controls, simulation, and software architecture for large-scale, mobile, autonomous robotic platform used for construction. Performed real-world demonstration of system by printing 14.6m diameter half-dome. Supported by *Alphabet’s X (formerly Google [x])*.
 - Developed all electronics, software, and controls for swarm-based robots that fabricate tubular fiberglass structures, experimentally verified by creating 20 robots, each autonomously built structures that were 4-meters tall.
- Univ. of Pennsylvania, GRASP Lab** *2009 to 2015*
Advised by Prof. Daniel Lee and Prof. Mark Yim, Graduate Research Assistant
- Developed a provably optimal algorithm for any-angle path planning by applying a novel overestimate heuristic to the Fast Marching Method. Additionally investigated heuristic strategies for multi-robot settings.
 - Developed software for user control of modular robots (CKBots) based on Robotics Bus Protocol.
