- Created algorithms for efficient and active learning of visual detectors via core-set selection methods.
 - Developed reinforcement learning algorithms for 6DOF controls of autonomous underwater vehicles, highly parallelized simulator; first known zero-shot sim-to-real deployment on physical AUV [ICRA 2025].
 - Designed agile autonomous systems for real-time visual tracking of marine animals using semi-supervised learning approaches; first known system to track a barracuda in the wild, over 300m distance [IJCV 2023].
 - Formulated controls and experiments for novel agile robotic platforms including buoyancy-driven and bio-inspired locomotion for minimally invasive animal monitoring tasks [IEEE AUV 2022; ICRA 2023; ICRA 2024].
 - Collaborated closely with biologists studying biodiversity and animal behavior in coral reef environments.
- University of Washington** 2018 – 2019
Advised by Prof. Kristi Morgansen (UW Aero&Astro) and Dr. Sarah Webster (UW APL), Graduate Researcher
- Designed automated tuning strategies for Kalman filters used on UW Seaglidors [OCEANS 2019].
- MIT Media Lab, Mediated Matter Group** 2016 – 2018
Advised by Prof. Neri Oxman, Graduate Research Assistant
- Designed controls, simulation, and software architecture for large-scale, mobile, autonomous robotic platform for 3D printing construction. Built on 4-DOF hydraulic cherry picker arm and a KUKA arm for fine-grain manipulation. Performed real-world demonstration of system by 3D-printing 14.6m diameter half-dome. Supported by *Alphabet’s X (formerly Google [x])* [Sci. Rob. 2017, cover].
 - Developed electronics, software, controls, and manufacturing processes for swarm-based robots that fabricate tubular fiberglass structures; experimentally verified by creating 20 robots that each autonomously built a 4m tall structure [CORO 2018; Sci. Rob. 2018].
- University of Pennsylvania, GRASP Lab** 2009 – 2015
Advised by Prof. Daniel Lee and Prof. Mark Yim, Graduate Research Assistant
- Developed a provably optimal algorithm for any-angle path planning by applying a novel overestimate heuristic to the Fast Marching Method. Additionally investigated heuristic strategies for multi-robot settings.
 - Built software for user control of modular robots (CKBots) based on Robotics Bus Protocol.
